

Progression in Teaching and Learning Subtraction

Year Group and Notes	Written Calculations	Models & Images / Manipulatives	Mental Calculations for fluency	Known Facts for fluency	Reasoning and Problem Solving
Foundation Stage Development Matters/ELGs	Finds one less than a number to 10	Select two groups of objects to make a given total of objects	-In practical activities & discussion, begin to use the vocabulary involved in subtraction	--Use a range of strategies for - incl some recall of number bonds	
Year 1 - Understand subtraction as 'taking away' objects from a set and finding how many are left -Read, write and interpret mathematical statements involving – and = -subtract one-digit and two-digit numbers to 20 Vocabulary: take away, distance between, less than	Record their work, e.g. - record their work with objects, pictures or diagrams - begin to use the symbols '-' and '=' to record calcs with numbers to 20 -solve one step problems involving subtraction using concrete objects, pictorial representations and missing number problems		- Subtract numbers of objects to 10 - Begin to subtract by counting back from the number of objects in the first set	<u>Instant recall</u> - Halves of even numbers to 20 - Know 'one less' than numbers to 20, e.g. 12 - 1 - Subtraction facts for number bonds to 20	
Year 2 - 'How many more' should be introduced e.g. $8 + \underline{\quad} = 11$ - Count in 10s and 1s first then, quickly move to more efficient jumps (see bridging pic) -recognise inverse and use this to check calculations and solve missing number problems. -understand that subtraction cannot be done in any order (not commutative) Vocabulary: take away, distance between, less than, difference , subtract	- Subtract TU-U, TU-T, TU-TU - Solve problems using concrete objects and pictorial representations, including those involving numbers, quantities and measures. - Record in columns to support place value <u>Counting on on the number line</u> Subtract two digit numbers using a written method, e.g. 36 - 13, (including bridging 10, e.g. 42 - 15) . Start at the lower number on the number line and count on	Subtracting 10 with Numicon Until chn can do this seamlessly, don't start on number line $25 - 10 = 15$ 	Subtract TO-O, TO-T, TO-TO Use counting on to derive subtraction facts to 20 where relevant, e.g. $19 - 17 = 2$ Record their work in writing, e.g. - record their mental calculations as number sentences Number line images of mental subtraction: BRIDGING $42 - 27 =$ COMPENSATING $36 - 27 =$	<u>Instant recall</u> <ul style="list-style-type: none"> Halves of even numbers to 20 Subtraction facts from 20 Know 10 less than any number to 100 (model link to number bonds with Numicon) <u>Derived</u> <ul style="list-style-type: none"> Subtraction facts from numbers to 100 (e.g. $90 - 20 = 70$) 	

<p>Year 3</p> <ul style="list-style-type: none"> - Need to really work on building understanding of subtraction as 'finding the difference/counting on' - 'Never partition both numbers for take away'. Need to teach this explicitly as otherwise chn will. - Give chn lots of practice on choosing when to use counting on (small difference/ numbers close together) vs taking away (large diff/ taking away a small amount)- -Subtract decimals in the context of money where bridging is not required -Solve problems including missing number problems, using number facts, place value and more complex subtraction -Estimate and use inverse operations to check answers to calculations 	<p>Subtract three-digit numbers including bridging 10 or 100 using formal written methods</p> <p>Progressions towards decomposition</p> <ol style="list-style-type: none"> 1) $83 - 47 =$ Can you partition 83 so you can see 47 in it? 2) Expanded decompositions 3) Decomposition with place value counters/ straws/ diennes alongside writ $\begin{array}{r} 3 \overset{5}{\cancel{6}} 2 \\ - 1 \ 2 \ 4 \\ \hline 2 \ 3 \ 8 \end{array}$ <p>Subtract decimals in the context of money where bridging not required</p>	 $\begin{array}{r} 60 \ 1 \ 2 \\ 70 \ 4 \ 7 \\ \hline 20 \ 5 \end{array}$ $\begin{array}{r} 72 \\ - 47 \\ \hline 25 \end{array}$ <p>Column subtraction</p> <p>Model exchanging using diennes/place value counters, as shown fully on separate sheet.</p> 	<p>Subtract HTO-O, HTO-T, HTO-H mentally, e.g.</p> <ul style="list-style-type: none"> - Calculate $63 - 26$ <p>(Counting back or counting on incl using compensating or bridging where relevant)</p> <ul style="list-style-type: none"> - Complements to 100, e.g. $100 - 64$ <p>Counting on mentally on a number line for numbers close together e.g. $94 - 78$</p> <p>Subtract decimals in the context of money where bridging not required</p> 	<p>Instant recall</p> <ul style="list-style-type: none"> • Half of 90, 70, 50 and 30 <p>Derived</p> <ul style="list-style-type: none"> • All subtraction facts from numbers to 20 (derived using bridging, compensating or near doubles) • Subtraction facts for multiples of 10, e.g. $160 - 70 = 90$ 	
<p>Year 4</p> <ul style="list-style-type: none"> -When working with money, teach that when finding change from a round number (e.g.£5, £10, £20) it is easier to count on on a number line than use column subtraction. -Keep chn visualising the starting number to help them to remember to exchange when necessary -Solve addition two-step problems in contexts, deciding on which method to use and why. -Estimate and use inverse operations to check answers to a calculation 	<p>Column subtraction</p> <p>Subtract whole numbers with more than 4 digits using formal written methods</p> <p>Use efficient written methods of subtraction, e.g.</p> <ul style="list-style-type: none"> - Calculate $1025 - 336$ - Subtract decimals to 2 places $\begin{array}{r} 3 \overset{5}{\cancel{6}} 2 \\ - 1 \ 2 \ 4 \\ \hline 2 \ 3 \ 8 \end{array}$		<p>Continue to use counting on for all calculations that can and should be done mentally</p> <p>Practise mental methods with increasingly large numbers to aid fluency</p>	<p>Instant recall</p> <ul style="list-style-type: none"> • Half of 9, 7, 5 and 3 <p>Derived</p> <ul style="list-style-type: none"> • Halves of decimals to 1 dp for even tenths, e.g. half of 5.8 	
<p>Year 5 / 6</p> <ul style="list-style-type: none"> - Reinforcing alignment of dps for column subtraction. Show how chn can write in 0 for e.g. empty hundredths as place holder. -Solve problems including decimals up to 3 decimal places -Add numbers with more than 4 digits 	<p>Column subtraction</p> <p>Subtract numbers that do not have the same number of decimals places</p>		<p>Continue to use counting on for all calculations that can and should be done mentally</p> <p>Practise mental methods with increasingly large numbers to aid fluency</p> <p>Mental calculations with mixed operations and large numbers</p>	<p>Derived</p> <ul style="list-style-type: none"> • Halves of decimals to 1 dp for odd tenths, e.g. half of 5.7 	

-Use rounding to check -Solve multi-step problems -Use estimation to check answers to calculations

Fractions

<p>Year 3 Subtract fractions with the same denominator within one whole e.g. $5/7 - 1/7 = 4/7$</p>	<p>Rectangle Model Use the rectangle model to visualise the given fractions. Subtract numerators that don't exceed 1 whole. Development into subtracting numerators without using rectangle model.</p>		<p>Subtract single digit numbers.</p>	<p><u>Instant recall</u></p> <ul style="list-style-type: none"> Subtraction of single digits numbers 	<p>Build a wall – Problem Solving (Finding equivalents – showing which fractions can be subtracted from another to form a new fraction).</p>
<p>Year 4 Subtract fractions with the same denominator (With improper fractions). $8/5 + 4/5 = 4/5$</p>	<p>Rectangle Model Use the rectangle model to visualise the given fractions. Subtract numerators that exceed 1 whole. Development into subtracting numerators without using rectangle model.</p>		<p>Subtract single digit numbers.</p>	<p><u>Instant recall</u></p> <ul style="list-style-type: none"> Subtraction of single digits numbers 	
<p>Year 5 Subtract fractions with the same denominator and denominators that are multiples of the same number. (Improper and mixed number facts) $12/5 - 4/5 = 8/5 = 1 \frac{3}{5}$ $7/4 - 3/8 = 11/8 = 1 \frac{3}{8}$</p>	<p>Rectangle Model Use the rectangle model to visualise the given fractions. Subtract numerators that exceed 1 whole and convert fractions to common denominators. Use visual rectangle to calculate mixed number fraction. Development into subtracting numerators without using rectangle model.</p>		<p>Subtract single / double digit numbers Calculating multiples of numbers</p>	<p><u>Instant recall</u></p> <ul style="list-style-type: none"> Subtraction of single / double digits numbers Multiples of numbers 	
<p>Year 6 Subtract fractions with different denominators and mixed numbers, using the concept of equivalent fractions. $14/5 - 7/10 = 21/10 = 2 \frac{1}{10}$ $3 \frac{3}{4} - 1 \frac{2}{8} = 20/8 = 2 \frac{4}{8}$</p>	<p>Rectangle Model Use the rectangle model to visualise the given fractions. Subtract numerators that exceed 1 whole and convert fractions to common denominators. Use visual rectangle to calculate mixed number fraction. Development into subtracting numerators without using rectangle model.</p>		<p>Subtract single / double digit numbers Calculating multiples of numbers</p>	<p><u>Instant recall</u></p> <ul style="list-style-type: none"> Subtraction of single / double digits numbers Multiples of numbers
